## The new Delta Line

The actuator plates of the new Delta Line convince through stylish design variants and a wide selection of differing versions.

The range of new Delta actuator plates was developed especially for use in modern bathroom worlds. The smaller dimensions of the plates are fully in line with the latest trends and enable them to fit seamlessly into harmonious bathroom designs.

### Design

The Delta actuator plates are available in both, the flush-stop as well as the dual flush version – each in three attractive colours. The design selection now includes not only round, but also square buttons to fit into various bathroom environments.

### Extension of existing range

The new line is distinguished not only by modern design but also represents an extension of the existing range in the accustomed high quality. The Delta range thus creates added value for the user compared with previous models.

## Kombifix Elements

New cisterns have also been developed to match the Delta Line; these are adapted to the smaller dimensions of the actuator plates. The service openings are designed such that easy access for maintenance is ensured at all times.

### Kombifix element with UP172, front actuation

#### Application Purpose

- For installation in front of or inside a solid wall
- For wall-hung solutions

#### Characteristics

- Installation height 109 cm
- Installation depth 8 cm
- Dual flush with Delta50 or Delta21 actuator plate

#### Product Details

Factory setting	6 and 3 l
Flush range small	3 l
Flush range large	6/9 l
Interruptible flush-stop	6/9 l
